

## Project Sprint Planning Notes

Team: Team 16

Sprint: 1

Date: 13/08/2022

Attended:

Scrum Master: Daniel Gao

Product Owner: Prakash Adhikari

Development team:

Rico Wu

Wyatt Jenkins

Nelson Ngo

Lucas Bui

### 1. Goal

*What is the aim that you are trying to achieve by running this sprint?*

For this sprint, our team is aiming to complete the full implementation flow from frontend to backend for the registration and profile page. We are also planning to create the ER diagram and setup our user database.

### 2. Duration of the sprint

2 weeks

### 3. What is the team's vision for this sprint?

*Which items of the product backlog will be committed to sprint backlog and why?*

Two user stories under the epic "registration" will be committed to this sprint backlog because our team believes the registration and profile page is an essential feature of the application and takes highest priority.

*What will the potentially shippable product look like in the end? What features will it have in its working form?*

The shippable product for this sprint will include the user been able to register a new account and be able to successfully log in. This feature will also contain the business logic to identify the type of user logging in.

### 4. Estimation in story points

*Team to estimate story points for each of the items. Provide some sort of justification.*

Item	Story Point	Justification
New user signs up to the system	8	The item requires the team to setup the project structure for the whole application. The registration interface requires different components from the front and backend and will take time to complete. The item also involves setting up a user database, which also requires more time.
User creates a profile	8	The item requires the team to setup the project structure for the whole application. The registration interface requires different components from the front and backend and will take time to complete. The item also involves setting up a user database, which also requires more time.
